

Sales Associate Manual (Stupid Simple)

Your job

- Build the customer cart.
- Create the Sales Order token.
- Hand the customer to Cashier.

You NEVER do

- You do not enter opening cash amounts.
- You do not close shifts.
- You do not take payment.
- You do not release goods.

Sales Associate screen

When you do what

1. Start of shift:
 - Open POS.
 - If the start dialog appears, you only pick `Company` and `POS Profile`, then click `Submit`.
 - SA starts a non-cash session. No opening amount entry.
2. During shift:
 - Select customer.
 - Add items.
 - Confirm total with customer.
 - Click `Save/New` to create token.
3. End of shift:

- Make sure no waiting customer is missing a token.
- Escalate blocked orders to supervisor.

Every button/field you use (SA)

1. `Search Items` field:
 - Type item name/code.
2. Item list row:
 - Click row to add item to cart.
3. `Customer` field (right panel top):
 - Set the customer for the sale.
4. `Type` field:
 - Usually `Invoice`/`Order` mode control.
 - SA should keep normal order-taking flow for token handoff.
5. `Held`:
 - Open held drafts (only if your store process uses this).
6. `Save Quote`:
 - Save current cart as quote (if enabled in profile).
7. `Select Quote`:
 - Load an existing quote (if enabled).
8. `Return`:
 - Return flow (usually cashier/supervisor process).
9. `Cancel`:
 - Clear current invoice/cart.
10. `Save/New`:
 - Main SA action. Creates Sales Order token and resets for next customer.
11. `Print Draft`:
 - Print draft copy only when store policy requires it.
12. Left ticket icon (Order Monitor):
 - Open monitor panel to view pending order flow.
13. In monitor panel: `All (date)`, `Mine`, refresh icon:
 - `All (date)`: all pending orders for profile/date.
 - `Mine`: only orders linked to your user.
 - Refresh: reload monitor list.

Important sanity rule

- If anyone asks SA to enter opening shift money, that is wrong.

- Opening cash is cashier-only.
