

Naming Scheme Preferences for Future AI Agents

Purpose

This document captures the user's preferred naming patterns for projects, branches, folders, and task artifacts. Future AI agents must treat this as a working standard unless the user explicitly overrides it.

Core Style Rules

1. Use **clear, descriptive names** over generic names.
2. Prefer **topic-focused folders** inside ``LLM_DEVELOPMENTS``.
3. Keep artifact names **short but explicit**.
4. Use **underscores** for multi-word file names where readability matters.
5. Match user-provided capitalization exactly when user specifies it.

Folder Naming Preferences

- Root context docs should live in ``LLM_DEVELOPMENTS``.
- For a specific workstream, create a dedicated subfolder using a descriptive domain-style name.
- Example used by user preference:
- ``LLM_DEVELOPMENTS/POS_TOKEN_and_EDGE_RELAY/``

Document/File Naming Preferences

- Main context PDF should use concise descriptive name.
- Current accepted name:
- ``POS_token_and_edge_relay.pdf``
- Supporting script names should be explicit and functional.
- Example: ``generate_pdf.py``

Branch Naming Preferences

Observed accepted branch patterns from this project:

- ``fix/app-install``
- ``cline-codex-v1``
- ``cline-codex-v2``
- ``kilo-codex-v1``

Practical guidance:

- Use purpose + iteration suffix when relevant (e.g., ``-v1``, ``-v2``).
- Keep branch names human-readable and tied to task scope.

Task / Commit Naming Preferences

User accepts concise imperative commit messages with scope prefix patterns such as:

- ``feat(relay): ...``
- ``feat(ui): ...``
- ``chore(security): ...``
- ``docs(llm): ...``

Guideline:

- Include scope in parentheses where possible.
- Keep subject specific to one intent.

LLM Handoff Packaging Preference

For significant multi-step work:

1. Keep a markdown source document.
2. Generate a PDF from that source.
3. Store both in a clearly named topic folder under `LLM\_DEVELOPMENTS`.
4. Include the generation script in the same folder for reproducibility.

Enforced Convention for This Repository (current)

- Keep POS token/relay handoff assets under:
 - `LLM\_DEVELOPMENTS/POS\_TOKEN\_and\_EDGE\_RELAY/`
- Expected files in that folder:
 - `POS\_token\_and\_edge\_relay.md`
 - `POS\_token\_and\_edge\_relay.pdf`
 - `generate\_pdf.py`

Change Control

If the user gives a new naming preference in chat, future agents should:

1. Update this document.
2. Apply the new convention in subsequent artifacts.
3. Avoid retroactive renaming unless asked.
